

## WAVERLEY WIND FARM

CLIENT  
Higgins

LOCATION  
South Taranaki

NUMBER OF MODULES  
6

The Waverley wind project is a 130MW onshore wind project developed near Waverly, South Taranaki. The project is spread over 980ha and will be installed with 31 wind turbines to generate 130MW of renewable energy. Portacom was engaged to establish a site compound and site facilities to accommodate personnel contracted to complete site works.

The modules were craned in over two days with initial site preparation works, building connections and the completion of external decking totaling just 2 weeks on site.

Portacom's ability to complete the site setup within a short period meant the project could begin site works and installation on time, maximising the project's outcomes and ensuring a happy customer.
