# WASTE STORAGE TANK

Our waste tanks are strategically placed beneath the buildings, efficiently managing waste without requiring extra space on-site. Delivered and installed with your toilet or ablution, it offers an easy solution for liquid waste management. With regular pump-out services, your site or project will remain functional, ensuring seamless operations.

Include one of our high-level alarms for peace of mind. It's designed to alert you and prevent any messy "overflow" moments from your waste tank.
