

## Christchurch Engine Centre

**CLIENT**  
Apollo Projects

**LOCATION**  
Christchurch

**NUMBER OF MODULES**  
7

**TIMEFRAME**  
12 weeks

Portacom partnered with Apollo Projects to deliver a rapid, high-quality site solution for the Christchurch Engine Centre. The project called for a full temporary facility setup to support construction works, including office spaces, lunchrooms, ablutions and waste management. With a tight two-day installation window, Portacom coordinated multiple stakeholders and logistics partners to ensure delivery and compliance were achieved without delays. The buildings were deployed on a 12-week hire arrangement, offering the flexibility and functionality required for an evolving site environment.

### Solution

- 2 x 12x3m office units
- 2 x 12x6m lunchrooms
- 3 x 4.8x3m units
- 2 x waste tanks

Thanks to strong project management and local support, the install included two 12x3m offices, two 12x6m lunchrooms, three 4.8x3m utility units and two waste tanks - all delivered and commissioned within scope. Portacom's ability to mobilise quickly, adapt to specific needs, and provide code-compliant solutions made them the partner of choice. From planning to post-install support, the result was a smooth, efficient setup that allowed work on the new Christchurch Engine Centre to move ahead without interruption.
